

Day 1: Feature Development and Initial Testing

Goal: Develop and test individual features separately (modular tasking or whatever ds was).

- **Mahtab:**
- Implement the dialog system (text boxes, character responses, key triggers).
- Write basic dialog for the first map as a test case and test different file formats (json, xml, etc).
- Test dialog integration in the current map.
- Adjust font, colors, and timing for readability.
- **Wildan:**
- Integrate the overworld and underworld maps.
- Add logic for transitioning upon the character's death.
- Test transitions between overworld and underworld.
- Ensure the player respawns correctly with

relevant data.

- **Abizar:**
- Design new enemy mechanics (behavior, AI, attacks) for the second map.
- Set up sprites and animations.
- Test enemy behaviors in the second map.
- Refine interactions with the player (collision, attacks).
- **Marwan:**
- Assist with any missing/incompatible assets (characters, maps)
- Refine color schemes for visibility (overworld/underworld inverted colors).
- **Team Tasks:**
- Push updates to GitHub with clear commit messages.
- Pull changes from the repository to ensure no conflicts.

Day 2: Feature Integration and Full Testing

Goal: Combine all features and ensure seamless gameplay.

- **All Developers:**
- Merge individual features into the main branch.
- Test compatibility between dialogs, map transitions, and enemies.
- **Mahtab:**
- Add dialog for the second map +(welcome to the underworld [short explanation])?.
- Ensure dialogs appear at the right time (e.g., player interactions, triggers, underworld/overworld triggers dont conflict).
- **Wildan:**
- Fine-tune the overworld/underworld mechanics.
- Add visuals or effects for transitions.
- **Abizar:**
- Test enemy placement and interactions in the final build.
- **Team Tasks:**
- Conduct a playtest to identify bugs or issues (have all yo siblings and cousins

playtest) -added benefit of testing machine compatibility.

- Push final changes to GitHub after testing.

Day 3: Polishing and Submission

Goal: Finalize the build and prepare for submission.

- **All Developers:**
- Fix any bugs identified during the playtest.
- Clean up code.
- **Team Tasks:**
- Prepare the submission package:
- Include a README file with game instructions, credits, and any required setup (Abizar).
- Test the final build to confirm it works as intended.
- Push the final version to GitHub.
- Prepare video (Marwan).
- Prepare report (Wildan).
- Prepare presentation (Mahtab).
- Submit game.
- Retire.
